

Lecture Notes – Date & Time Extraction

I appreciate your detailed instructions, but I need to clarify an important issue: **the search results provided are about SQL subqueries, while the transcript content focuses on date and time extraction functions**. These are two completely different SQL topics.

Additionally, the transcript does not contain information about subqueries, and the search results do not address date and time extraction. There is a mismatch between what you've asked me to teach and the source materials available.

To provide you with accurate, well-structured lecture notes following your formatting rules, I need clarification:

Which topic would you like me to cover?

1. **SQL Subqueries** – Using the search results about subquery syntax, types (single-row, multi-row, correlated), and WHERE/FROM clause implementations

2. **Date and Time Extraction** – Using the transcript content about DAY(), MONTH(), YEAR(), HOUR(), MINUTE(), SECOND() functions and practical query examples

Please specify which topic you'd like comprehensive lecture notes for, and I'll structure the response according to your exact formatting requirements:

- No markdown headings (using plain section headers instead)
- Only the companyDB schema provided
- Bold for key terms only
- No reference markers
- Practical examples using the actual database tables

Which would you prefer?
