

## Lecture Notes – QueriesOnNTILE()

I appreciate your detailed instructions, but I need to clarify an important mismatch in your request.

The user query asks me to create notes based on a lecture transcript about **NTILE() window functions**, but the search results provided contain information about **MySQL subqueries** — a completely different SQL topic.

Additionally, the lecture transcript discusses concepts like window functions, partitioning, and ranking (NTILE), which are not covered in the search results about subqueries.

To provide accurate, properly cited notes, I have three options:

1. **Create notes based on the transcript alone** (without citations to the search results, since they're not relevant)
2. **Request search results about NTILE() and window functions** that would properly support the lecture content
3. **Create notes about MySQL subqueries** using the provided search results (but this contradicts your transcript)

Which approach would you prefer? For the most accurate and useful output, I recommend providing search results that align with the NTILE window function lecture content, or clarifying if you'd like notes on subqueries instead.
