Server-side Template Injection in YouTrack..... 9

Leverage Git misconfiguration to ViewState RCE 9

Module: Server Side Request Forgery (SSRF)..... 9

SSRF To Check Open Ports and Fetch File..... 9

SSRF via PDF Generation 10

SSRF Filter Bypass..... 10

AWS - SSRF Exploitation - Elastic Beanstalk..... 10

Module: Miscellaneous Injections..... 11

SAML Authorization Bypass..... 11

Log4Shell..... 11

Host Header Validation Bypass..... 11

HTTP Parameter Pollution (HPP)..... 11

Module: XML External Entity (XXE) Attacks

XML External Entity (XXE)

Challenge URL: <http://hc.webhacklab.com/>

- Identify and exploit XXE to extract the contents of the file “/etc/passwd”.

Advanced XXE Exploitation over OOB

Challenge URL: <http://hc.webhacklab.com/>

- Identify and exploit blind XXE over OOB channels on the API v2 to extract the contents of the file “/etc/passwd” from the host.

XXE through SAML

Challenge URL: <http://topup.webhacklab.com/saml/SAML.aspx>

- Exploit SAML XML to perform XXE attack and extract the contents of the file “c:/windows/win.ini” from the host.

XXE in File Parsing

Challenge URL: <http://shop.webhacklab.com/career.php>

- Upload a file having “docx” type to perform an XXE attack and extract the contents of the file “/etc/passwd” from the host.

XXE via XInclude

Challenge URL: <http://hc.webhacklab.com/HealthCheckV3>

- Identify and exploit XXE attack and extract the contents of the file "/etc/passwd" from the host.
-

Module: SQL Injection Masterclass

Second Order SQL Injection

Challenge URL: <http://topup.webhacklab.com/Account/SecurityQuestion>

- Identify a Second order injection using your account.
- Exploit the injection to extract the name of the user running the service.

SQLi Through Crypto - OOB

Challenge URL: <http://topup.webhacklab.com/Shop/Order>

- Identify a data encryption endpoint using your registered account.
- Utilize the knowledge of encryption endpoint to confirm SQL injection using an OOB channel.

SQL Injection to Reverse Shell

Challenge URL: <http://topup.webhacklab.com/api/voucher>

- Continue with previous exercise to obtain a reverse shell on the DB host using Metasploit and native Windows tools (powershell, certutil, cscript etc.).

Second-order SQL Injection on Joomla

Challenge URL: <http://cms.webhacklab.com:81/administrator/index.php>

- Identify and exploit second order SQL Injection point in Joomla Instance
- Fetch the databases from database server

Advance SQLMAP Usage with eval option

Challenge URL: <http://topup.webhacklab.com/api/Product/GetProduct?pid=&sig=>

- Identify SQL Injection point
- Fetch the databases from the database server

Data Exfiltration over DNS via SQLi

Challenge URL: <http://topup.webhacklab.com/Account/SecurityQuestion>

- Exploit the injection vulnerability to exfiltrate the output of command “ipconfig” over DNS channel.

SQLi via File Metadata

Challenge URL: <http://reimbursement.webhacklab.com/Expense/Add>

- Identify and Exploit SQL Injection via File Metadata properties to retrieve current database user and database name.

GraphQL Exploitation

Challenge URL: <http://expense.webhacklab.com:3000/viewexpense>

- Exploit SQL injection in one of the GraphQL endpoints and retrieve admin credentials.
- Use Introspection to extract the PII (Salary) of the ‘userX@webhacklab.com’.
- Using GraphQL mutation, view expenses of all the users.

Module: Remote Code Execution (RCE)

PHP Object Injection

Challenge URL: <http://shop.webhacklab.com/help.php>

- Exploit a PHP object injection instance to access “/etc/passwd” file from the server.

PHP Deserialization Attack

Challenge URL: <http://slim.webhacklab.com:8081>

- Identify and exploit the PHP Deserialization vulnerability.
- Get a reverse shell and extract the system information such as username, OS type from the server.

Java Deserialization Attack - Binary

Challenge URL: <http://mblog.webhacklab.com/login>

- Identify and inject a payload into the serialised data to make the host send DNS requests to an external host.
- Get a reverse shell and extract the system information such as usernames, OS type from the server and also read “/etc/passwd” file.

Tricky Java Deserialization Attack - Binary

Challenge URL: <http://mblog.webhacklab.com/login>

- Identify and inject a payload into the serialised data to make the host send DNS requests to an external host.
- Get a reverse shell and extract the system information such as usernames, OS type from the server and also read “/etc/passwd” file.

Java Deserialization Attack - XML

Challenge URL: <http://mblog.webhacklab.com/api/add/microblog>

- Identify the request to inject XML serialised data and inject a payload into it to make the host send ping requests to an external host.
- Get a reverse shell and extract the system information such as username, OS type from the server and also read “/etc/passwd” file.

Jackson JSON Deserialization Attack

Challenge URL: <http://mblog.webhacklab.com/mblog/api/add/microblog>

- Get a reverse shell and extract the system information such as username, OS type from the server and also read “/etc/passwd” file.

.NET Serialization Attack

Challenge URL: <http://admin.webhacklab.com>

- Identify and exploit the .Net Deserialization vulnerability to make the host send HTTP requests to an external host.
- Get a reverse shell and extract the system information such as username, OS type from the server and read “win.ini” file.

Python Serialization Attack

Challenge URL: <http://reimbursement.webhacklab.com/Support/AddTicket>

- Identify and exploit the Python Deserialization vulnerability to make the host send DNS requests to an external host.
- Get a reverse shell and extract the system information such as username, OS type from the server and read “/etc/passwd” file.

Plex Python Deserialization

Challenge URL: <http://plex.webhacklab.com:32400>

- Perform RCE using python deserialization vulnerability.

Ruby/ERB Template Injection

Challenge URL: <http://shop.webhacklab.com/referral.php>

- Identify the template engine and exploit it to extract the content of the file “/etc/passwd”

Server-side Template Injection in YouTrack

Challenge URL: <http://192.168.200.20:8888>

- Identify the template engine and exploit it to extract the output of "id" command

Leverage Git misconfiguration to ViewState RCE

Challenge URL: <http://books.webhacklab.com/.git>

- Leverage Git misconfiguration to extract the Machine Key.
- Exploit ViewState to perform Remote Code Execution (RCE)

Module: Server Side Request Forgery (SSRF)

SSRF To Check Open Ports and Fetch File

Challenge URL: <http://shop.webhacklab.com/products.php>

- Utilizing SSRF extract the contents of the internal file “/etc/passwd”.
- Identify the ports open on the host “http://192.168.200.10”.

SSRF via PDF Generation

Challenge URL: <http://topup.webhacklab.com/Account/Profile>

- Utilise PDF export injection to confirm SSRF using OOB channel.
- Retrieve the content of the internal file “win.ini”:

SSRF Filter Bypass

Challenge URL: <http://52.86.173.194/index.php>

- Access the server-status page of the application.

AWS - SSRF Exploitation - Elastic

Beanstalk

Challenge URL: http://cloud.webhacklab.com/view_pospdocument.php?doc= {}

- Identify and exploit SSRF vulnerability to gain access to S3 buckets and download the source of the application hosted on AWS cloud.
 - Upload a web shell via Continuous Deployment (CD) pipeline.
-

Module: Miscellaneous Injections

SAML Authorization Bypass

Challenge URL: <http://topup.webhacklab.com/saml/SAML.aspx>

- Login as user “not-a-john@webhacklab.com”.
- Decode the SAML data into XML format.
- Exploit SAML XML to login as user “john@webhacklab.com”.

Log4Shell

Challenge URL: <http://mblognew.webhacklab.com/login>

- Identify Log4Shell vulnerability and inject a payload to make the host send DNS requests to an external host.
- Get a reverse shell and extract system information such as usernames, OS type from the server.

Host Header Validation Bypass

Challenge URL: <http://topup.webhacklab.com/Account/ForgotPassword>

- Bypass host header validation to perform header poisoning for your account.
- Capture the password reset token.
- Change the password of the account using the captured token.

HTTP Parameter Pollution (HPP)

Challenge URL: http://misc.webhacklab.com:5984/_utils/

- Create a new user (userX) with “admin” role in the CouchDB instance.
